The Rock Salt Mines and principal Brine Springs are in Cheshire; and the chief part of the Cheshire Salt, both fossil and manufactured, is sent by the river Weaver to Liverpool, a very small proportion of it being conveyed elsewhere by canal or land carriage. There are Brine Springs in Staffordshire, from which Hull is furnished with White Salt, and in Worcestershire, from which Gloucester is supplied. If to the quantity shipped by the Weaver 100,000 tons of White Salt are added annually for internal consumption and exports, exclusive of Liverpool, the total manufacture will be approached very nearly; but as there is now no check from the Excise it is impossible to ascertain it exactly. Fossil Salt is used in small quantities at some of the Cheshire manufactories to strengthen the brine, but is principally exported; some to Ireland, but chiefly to Belgium and Holland.

a At the Mints of Mexico, Zacatecas, Sombrerete, Chihuahua, Durango, Guanajuato, Guadalajara, San Luis, Potosi, and Tlalpan.

b At the Royal Mint of Potosi.

c The above statement, as far as the year 1830, exhibits the amount raised in and exported from the province of Coquimbo. In 1834 it presents the amount raised in the whole kingdom, as far as the same can be made out; but no accurate return can be procured, because the Gold is chiefly exported in a clandestine manner to avoid the export duties, which are about 4 per cent. *ad valorem*.

d At the Mint of Santiago.

e The greater proportion of the Gold produced in Peru is smuggled out of the country in the shape of bullion, the profit to the smuggler being £1. 14*s*. per Marc, besides 2 per cent. export duty on coined Gold, the exportation of uncoined Gold being prohibited.

f At the Mints of Lima and Cuzco.

* At exchange of 48*d*. per dollar.

† At 136 dollars per marc, and exchange of 48*d*. per dollar.

‡ At 50,000 rubles per pood. Exchange 10½*d*. per ruble = £60. 15*s*. per lb. avdps.

§ At exchange of 48*d*. per dollar.

a At the Mints of Mexico, Zacatecas, Sombrerete, Chihuahua, Durango, Guanajuato, Guadalajara, San Luis, Potosi, and Tlalpan.

b At the Royal Mint of Potosi.

c From 1808 the above statement exhibits the quantities annually brought to the Royal Rescate Bank, calculated from the duties received by the government. As in the twenty preceding years the sums brought to the bank averaged one-sixth of the whole amount coined, one-fifth should be added to the above sums to present an approximate account of the total coinage.

d This column exhibits, as far as the year 1830, the amount raised in the province of Coquimbo, and exported thence.

e It is estimated that two-thirds more are produced than here specified, and are smuggled out of the country in the state of native silver (plata piña), the difference in favour of the smuggler being more than ten per cent.

f In these years no returns have been received from some of the smelting-houses, consequently the sums stated fall short of the correct amount.

g At the Mints of Lima and Cuzco.

* At exchange of 48*d*. per dollar.
† At 8 dollars 4 reals per marc. Exchange 48*d*. per dollar.

* In the Boroughs marked with an asterisk the returning-officers have given the number for the same year in both of the accounts from which the above has been framed.

a No return was called for from any of the Universities.

b An informality in the publication of the town-clerk's and overseers' lists caused all the freemen but one, and all the occupiers in three streets, to the number of 579, as taken from the register of the preceding year, to be expunged from the register.

c No return was called for from any of the Universities.

No. 219—DENMARK.

(A). Statistical Tables relating to the Population of Denmark, according to the Census of 1834, preceded by an Introductory Report in illustration.

Introductory Report illustrative of the annexed Ten Statistical Tables, compiled from the Population Returns of Denmark, according to the Census taken in 1834.

Since the year 1801 no census of population had been taken in Denmark, when, after a lapse of 33 years, a Royal Ordinance directed this to be effected in the whole kingdom, on the 18th February, 1834. In consequence the necessary forms and instructions were despatched to the clergy in the rural parishes, as well as to the magistrates in the townships; and it was from the materials furnished by those functionaries that the Commission appointed by the King, "for a Statistical Investigation of the Resources of the Country," made up and published some time ago a set of Population Returns, from which I have compiled the following tables, which I herewith submit for the information of His Majesty's Government, viz.:—

1. A general summary of the population of each of the provinces of Denmark (Sleswick-Holstein excepted), from which it appears that the present population of the kingdom amounts to 1,223,807 souls.

2. A summary of the Population Returns of Denmark, with reference to the occupations of the people.

3. A summary of the same returns, with reference to the age, sex, and the matrimonial relations of the people.

4. A statement of the population of the cities and towns in Denmark, according to the same returns.

With regard to the statistical results to be derived from the census of 1834, the following details, chiefly drawn from the introduction to the Population Returns above alluded to, may serve as an illustration of the subject; and I shall accompany the same by such further tabular statements as the extent of the materials before me will allow me to furnish. With this view I transmit, in the first instance,—

5. A Return of the population of 1834, as compared with that in 1769, 1787, and 1801, which would show that in the 18 years, from 1769 to 1787, it only increased 3 per cent.; that during the following 14 years, from 1787 to 1801, it augmented about 10; but that in the last 33 years, from 1801 to 1834, the increase has been no less than 32 per cent.

As the Population Returns of 1769 appear to be very defective in many respects, and cannot altogether be relied on, in point of accuracy, I shall in most instances depart, in my disquisitions, from the year 1787, the epoch of the second census according to the preceding Tables. The great increase of population apparent since that period is mainly ascribed to the improved condition of the peasantry by their emancipation from bondage, and to a better regulation of the relations between land-owners and tenants; to the sale of large estates in small lots, by which a numerous class of small proprietors was gradually created; to the enclosure of commons, and to the progress made in the art of husbandry. As concomitant causes may be quoted, the introduction of vaccination, and better food, and greater cleanliness amongst the lower classes, combined with greater care for the destitute, particularly in case of sickness. The increase of population in the townships has nearly kept pace with that of the rural parishes up to the year 1801, but since that period the proportion has turned out against the latter, the increase in the townships, during the last 33 years, amounting to 47 per cent., while in the rural parishes it did not exceed 32.

The population of Copenhagen during the 14 years from 1787 to 1801, a period in which she was in a high state of commercial prosperity, advanced about 12 per cent., but in the succeeding 33 years the increase was only 18, a diminution arising from a succession of events tending to check its progress. Such were the fatal consequences of the war of 1807; the separation of Norway in 1814, and the consequent return of many Norwegian families to their own country; the reduction of the army and navy after the peace; and the gradual decay of trade, owing to the preservation of the prohibitive system, and to the loss of several important monopolies.

Amongst all the provinces of Denmark the island of Funen shows the greatest increase of population, it being as high as 56 per cent. in the townships, and 34 per cent. in the rural districts. Next follows North Jutland, with an increment of 47 per cent. in her towns, and 33 in the country. Zealand occupies the third rank; but the province whose population has least progressed is Lolland-Falster, a country very subject to ague and malignant fevers, which from time to time cause a great mortality amongst the inhabitants. In order to facilitate a comparison between Denmark and other countries, suffice it to add, that the annual increase of population in Sweden, during the 30 years from 1800 to 1830, amounts to about $\frac{3}{4}$ per cent.; in Prussia, during the 10 years from 1821 to 1830, to $1\frac{1}{8}$ per cent.; and in England, in the three decennial periods from 1801 to 1831, to $1\frac{1}{4}$ per cent.

As it may afford some interest to trace the population of Denmark in its annual progression, according to the returns of births and deaths, I have subjoined a Table marked No. VI, stating these particulars during a period commencing in 1802 and ending with 1833. The unfavourable results it exhibits in the four years, from 1829 to 1832, arise from contagious fevers which raged in several parts of the kingdom, particularly in the Islands of Zealand, Lolland-Falster, and Langeland, causing an unusual degree of mortality among the rural population, especially in 1831. The disease disappeared in 1832, but continued to exercise an unfavourable influence upon the number of the births for some time after.

It being desirable to ascertain the proportion of the population to the area of the country, I refer to the annexed Table, marked No. VII, illustrative of the density of the population in each of the four provinces of Denmark, at four distinct periods, namely, in 1769, 1787, 1801, and 1834,

from which it is made evident, that Denmark, with a superficies of 683,637 geographic square miles, has, at present, a population of 1,790 souls to each square mile, an increase of about 32 per cent. upon 1801. However considerable this increase may seem, still Denmark belongs to the countries thinly peopled, as compared with her southern neighbours, for instance with Prussia, which, at the commencement of 1831, counted 2,586 souls to each square mile.

A comparison between the density of the population in the towns with that of the rural districts offers the following results. Of 1,000 persons in Denmark, there lived—

	1769.	1787.	1801.	1834.
At Copenhagen	114	107	109	97
In the other Townships . . .	100	98	97	108
In the Rural Parishes	786	795	794	795

according to which the proportion between the population of the townships to that of the rural parishes would be the following:—

In 1769 . . . 272=1,000
„ 1787 . . . 258=1,000
„ 1801 . . . 260=1,000
„ 1834 . . . 259=1,000

The excess in the town-population of 1769 is hardly to be accounted for, the less so, as the proportion in the three succeeding periods has remained nearly equal.

As respects the proportions between the two sexes, a comparison of the different Population Returns gives the following results:—

Against 1,000 male persons, there lived in Denmark,—

1. In the Townships . . . 1769 . . . . 870 Females.
1787 . . . . 1,000 „
1801 . . . . 1,010 „
1834 . . . . 1,041 „

2. In the Country . . . . 1769 . . . . 1,043 „
1787 . . . . 1,023 „
1801 . . . . 1,020 „
1834 . . . . 1,017 „

3. In Town and Country . . 1769 . . . . 1,003 „
1787 . . . . 1,018 „
1801 . . . . 1,018 „
1834 . . . . 1,022 „

The proportion of women in 1769, as far as regards the townships, seems to be quite unnatural, and it cannot be explained otherwise than by a want of accuracy in making up the Population Returns, owing to an absence of interest in statistical investigation at the time. The proportion of later years, as will be observed, offers but little variation, and is more or less in accordance with the proportion of other countries, which was in England, in 1831, 1,026; and in France, 1,031; but in Sweden, in 1831, 1,076 females to 1,000 male inhabitants.

In order to afford a concise view of the numerical proportion between married and single persons, widowers and widows, the following statement, extracted from the returns of the years 1787, 1801, and 1804, will tend to show that, of 1,000 persons of each sex, there were,—

		Of the Male Sex.			Of the Female Sex.		
		Married.	Single.	Widowers.	Married.	Single.	Widows.
1. In the Towns	In 1787	330	639	31	331	560	109
	„ 1801	333	636	31	328	557	115
	„ 1834	287	683	30	269	612	119
2. In the Country	In 1787	378	595	27	370	558	72
	„ 1801	386	588	26	379	552	69
	„ 1834	349	619	32	342	580	78
3. In Town and Country . .	In 1787	368	604	28	362	558	80
	„ 1801	375	598	27	368	554	78
	„ 1834	337	632	31	327	587	86

The preceding table makes it apparent that the number of married persons was larger, and that of widowers and widows somewhat smaller, in 1801 than in 1787; but an opposite proportion, and in a more considerable degree, is manifest in 1834. A corresponding result will be found on comparing the number of marriages with the population in 1800 and 1833. In the former year the proportion was 1=109, and in the latter 1=115. The decrease in the number of marriages is partly explained by a relaxation in the morals of the people, said to have gradually crept in since the French Revolution, although it also seems to be indicative of the greater difficulty now in establishing a family than in 1801, or rather of the demands which are made for the support of a family being larger now than they were at the former period, which probably is also the case in many other countries. In France the proportion of marriages to the population was, in 1780, 1=113; but, in 1825, it had declined to 1=135. In England the proportion, in 1770, was 1=118; in 1790, 1=122; and in 1831, 1=129. In Sweden the proportion, in 1751, was 1=107; in 1825, 1=117; and in 1830, 1=130. It must however be observed, that a great number of the unmarried persons of both sexes included in the preceding table were so young that marriage between them was out of

the question. Excluding them from the calculation, the proportion of the single persons is naturally very much reduced, and the account will stand thus:—

		Men.	Women.
Of 1,000 Persons of each Sex	Over 20 years, were unmarried . . .	329	272
	„ 30 „ „ . . .	135	121
	„ 40 „ „ . . .	73	83
	„ 50 „ „ . . .	58	74

The comparative Table, No. VIII, is intended to show the number of persons in Denmark that lived out of 1,000, in each of the decennial periods from 0 to 100 years, distinguishing the sexes, as well as town and country, according to the census taken in 1787, 1801, and 1834, respectively. There is no great discrepancy in the first decennium from 0 to 10 years between the three periods just mentioned, whereas a considerable surplus in favour of the third period appears in the following decennium from 11 to 20 years, equal to 20—22 per cent., as compared with 1787 and 1801. In other words, of the whole population of Denmark in 1834, about 45,000 persons more were alive at the age of 20 than would have attained that age according to the proportions of 1801. In the two following decennial periods, from 20 to 40 years, the year 1834 again shows a surplus upon 1801, although the number is smaller than in 1787. In the latter periods of life the year 1834 rates below the two former years—a natural consequence of the excess in the number of persons alive in the earlier stages. According to the census, in Sweden, of 1830, the proportions adverted to in the preceding tables were the following:—

Of 1,000 Persons, there lived in Sweden,	From 0 to 10 years	251
	„ 10 „ 20 „	192
	„ 20 „ 30 „	150
	„ 30 „ 40 „	139
	„ 40 „ 50 „	106
	„ 50 „ 60 „	79
	„ 60 „ 70 „	53
	„ 70 „ 80 „	25
	„ 80 „ 90 „	5
	„ 90 „ 100 „	0,21

With regard to the distribution of the population according to the occupations of the people, it is to be regretted that no parallel returns exist whereby accurately to ascertain the changes that may have occurred since the year 1801, at which time a system entirely different from the present was acted upon in making up the Population Returns. In the year 1834, on the contrary, a new classification was introduced, according to which a distinction has been made between the population of the City of Copenhagen, the other townships, and the rural districts. As the subject is of some importance, it may not be superfluous to accompany the tables illustrative of the same (and which are annexed, *sub* No. III) with those further explanations they seem in many instances to require. It will be observed that these returns have been divided into two rubricks. Rubrick A embraces the number of those persons who, either as principals, or as deputies, clerks, journeymen, apprentices, and boys, belong to each class. Rubrick B includes the number of women, children, domestics, farm-servants, and other persons dependent for support upon each class, without belonging to rubrick A. I shall proceed by taking a view of each class in particular, considered according to its importance as regards its numerical proportion to the bulk of the population.

The "Agricultural Class" (VIII) is naturally the most numerous in Denmark; and, in the Table under consideration, it is made to include landed proprietors, great and small, farmers and country stewards, and also cotters, in so far as they principally live upon the produce of the land allotted to them. Nearly one-half of the population, namely, 490=1000, derive their chief support from agriculture, either as land-owners and farmers, or as belonging to their families and dependents. But if it be further considered, that the greater part of the numerous class of labourers (114=1,000) is likewise dependent upon agriculture for support, it may safely be advanced, that nearly three-fifths of the population of Denmark is occupied in agricultural pursuits. As far as regards Sweden, it has been computed that the proportion there is $\frac{3}{4}=1$.

Next in importance is the "Industrial Class" (X), the proportion of which to the population is equal to 181=1,000. It embraces the numerous divisions of artisans, mechanics, and handicraftsmen, besides brewers, bakers, millers, distillers, &c., and is most conspicuous in the townships, where it forms about one-third part of the population. The number of families living by manufacturing industry is not stated in the Returns before me, but it is very inconsiderable.

"The Class living by Trade" (XI), chiefly seated in the townships, is not only composed of wholesale and retail dealers, but also includes commercial agents, bankers, money-changers, brokers, carters, keepers of hotels, inns, eating-houses, gin-shops, beer and wine-houses, and the like; but its proportion to the population does not exceed 35=1,000.

"The Class living by the Sea" (IX) is still less important, and only constitutes 28=1,000 of the population. It chiefly comprises ship-masters, sea-faring men (not in the pay of the navy), fishermen, boatmen, and pilots.

"The Class of Pensioners, Capitalists, and persons living upon their own means" (XII) rather exceeds the two preceding branches in point of numerical proportion to the population, it being as high as 39=1,000. This would naturally lead to the conclusion that Denmark must either have a great number of capitalists, or a long pension-list, the former of which is not the case, although the latter has sometimes been complained of; but the apparent excess of this class is accounted for in the following manner. It is stated to have arisen from including in the list a number of agriculturists, who, on account of old age or infirmity, have ceded their lands to their children or others, with a reservation of a certain stipend for their maintenance, which stipend has been viewed in the light of an annual rent, enabling them to live upon their own means.

With respect to the Class I., "Clergymen, Church-officers, Schoolmasters, and Teachers," it must be remarked, that it is not confined to the professors and teachers employed in the higher establishments for public instruction, but that it embraces all those persons that have a steady employ as teachers in public or private, higher or lower schools.

Digitized by Google

Under the head of "Civil Officers and Clerks in Public Offices" (II) are not only reckoned all persons employed by the Government, with or without fixed salaries, such as proctors and land-surveyors, but also every one holding a municipal or other permanent, although subordinate, office. Employments of a temporary nature, such as civic charges, are excepted.

As belonging to class VI, have only been rated those "Under-officers and Soldiers" who are on actual duty, not those who are supernumeraries or on furlough. The classes IV and VI do not either include persons serving in civic corps.

By "Seamen of the Navy" (Class VII) are only understood those men that receive permanent pay, and are employed in the King's yards or otherwise. Registered seamen and all those belonging to the merchant-service are excepted.

The number of paupers in the whole kingdom is stated, for 1834, at 43,576, of which 4,795 are supported by the City of Copenhagen, 5,445 by the other towns, and 33,336 by the rural parishes—their proportion to 1,000 of the population being equal to 35. According to the census of 1801, the number then amounted to 28,441, about 31=1,000 of the population; showing a trifling increase of two-fifths per cent. In the Returns, already quoted, the paupers form class XV, and will be found inserted in the first rubrick only, upon the principle, that where the father of a family is supported under the poor-laws, his wife and children become pensioners upon the public also. This, however, cannot be said to be invariably the case, as the wife and children may possibly earn a larger or smaller share towards the support of the family, although in the receipt of parish relief. Probably it has not either been always strictly attended to by the officers on making up the returns, that the father of a family receiving relief, although not to such an extent as to form the principal source of his livelihood, ought not to appear under the head of "Paupers," but in the class to which he properly belongs, as earning the most considerable portion towards his exigencies, notwithstanding his receiving some pecuniary aid from the parish. It would, however, seem on the whole, that from the mere enumeration of persons, who on a given day were in receipt of relief under the poor-laws, a just estimate cannot be formed of the real state of the poor, without being better acquainted with the nature and extent of that relief, and with the circumstances under which it has been granted.

The annexed Tables, No. IX, *a* and *b*, of marriages, births, and deaths, during a period of 33 years from 1801 to 1833, show the following results:—

1st. The annual number of marriages, taking the average of 33 years, is	9,029
Of the last 10 years	9,840
2d. The proportion of marriages to the population, taking the average of 33 years	1=119
Of the last 10 years	1=123

Remark.—With reference to the 2d, it is necessary to state, that the population is here calculated as it was in the middle of the two periods for which the computation is made, which has been effected, in the first instance, by adding to the population of 1801 one-half of the increase of the following 33 years, according to the census of 1834; and, in the second case, by subtracting from the population of 1834 the surplus of births in the five years immediately preceding.

3d. It is made apparent from the Tables, No. IX, *a* and *b*, already adverted to, that the total number of births during 33 years from 1801 to 1833 has been	1,145,649
And the number of deaths	855,648
Leaving a surplus of births of	290,001
To which, adding the population of the 1st of February, 1801	925,680
The population ought to have been, at the end of 1833	1,215,681
In lieu of which it has been, according to the census of 1834	1,223,807
Leaving a deficiency of	8,126

which deficiency is accounted for by the defects of the Returns of births and deaths prior to the year 1827, and by the probability of more persons having immigrated than emigrated.

The preceding Tables, besides, afford the following results:—

4th. The proportion of illegitimate to legitimate births during 33 years from 1801 to 1833 is	1=11
During the last ten years	1=10
5th. The proportion of still-born children to live births during 33 years	1=24
During the last 10 years	1=24
6th. The proportion of births to deaths during 33 years	100=75
During the last 10 years	100=80

No. 223.—CANARY ISLANDS.

(A). Comparative Statement of the Population of the Canary Islands from the Year 1742 to 1835.

YEARS.	1742	1768	1802	1835	Increase in the 93 Years.
Teneriffe	60,218	66,354	70,067	85,011	24,793
Canary	33,864	41,082	55,093	68,040	34,176
Palma	17,580	19,195	28,824	33,089	15,509
Lanzarotte . . .	7,210	9,705	16,160	17,434	10,224
Fuerteventura . .	7,382	8,863	12,451	13,885	6,503
Gomera	6,251	6,645	7,915	11,742	5,491
Hierro	3,687	4,022	4,006	4,444	757
Total . .	136,192	155,866	194,516	233,645	97,453

It results from the foregoing Table, that in the 93 years which have passed from 1742 to the present, the population has augmented in the different islands in the following proportions:—

Teneriffe	41·17 per cent.	Fuerteventura. . .	88·09 per cent.
Canary	100·02 ,,	Gomera	87·20 ,,
Palma	88·22 ,,	Hierro	20·53 ,,
Lanzarotte . . .	141·80 ,,	And the 7 Islands .	71·26 ,,

To this augmentation of the population should be added the persons emigrated to America, the number of whom, estimated at 800 each year, amounts, in 93 years, to 74,400 souls; and if to this be added 300 foundlings that perish annually from the deplorable state to which the places for their reception are reduced, the increase of the population of the Canary Islands, in less than a century, may be estimated at 199,353 souls—that is to say, 150 per cent. nearly.

If the increase of the population in the 40 years until 1802 is compared with that of the 33 years until the present, it will be seen that, in the first term, it was 4·282 per cent., and in the second 20·11; resulting that, in the first epoch, the population increased 0·99 per cent. in each year, and in the second 0·61; this notable difference, which is still greater if it be considered that the emigration has diminished in late years, since the emancipation of America proves the great diminution of the riches of these islands.

The different proportion to be observed in the augmentation, respectively, of the population in each island is, without doubt, a matter for useful investigations as to the causes of this difference. Probably it may be accounted for from the greater or less fertility of the soil, mode of its cultivation, manner in which property is divided, contributions to which the lands are subject, and from the greater or less inclination of the inhabitants of each island to emigrate for America. It particularly demands attention, that in the Island of Lanzarotte, with a limited supply of fresh water, little woodland, harvests exceedingly precarious, though abundant when obtained, the increase of the population should have been so much greater than in the other islands. Examining the progressive order in which it has occurred, it will be seen that the increase was,—

From 1742 to 1768 . . . . 1·33
„ 1768 „ 1802 . . . . 1·23 } Annual.
And from 1802 „ 1835 . . . . 0·23

Observations—Deduced from the above data:—

1. That the Population of the Province has increased 3,921 souls.
2. That proportionably the Deaths have been greater in the different Islands, according to the following order: Gomera, Canary, Teneriffe, Hierro, Fuerteventura, Lanzarotte, and Palma.
3. The Births have been greater, according to the following: Lanzarotte, Fuerteventura, Canary, Teneriffe, Gomera, Hierro, Palma.
4. Illegitimate Children by the following: Teneriffe, Canary, Palma, Lanzarotte, Fuerteventura, Gomera, Hierro.
5. Marriages by the following: Teneriffe, Gomera, Fuerteventura, Hierro, Canary, Lanzarotte, Palma.
6. Of the 5,116 Deaths, nearly the third have died before attaining the Age of 10 Years; the fourth part before attaining the Age of 50; another third from 50 to 90 Years; 8 only in 1,279 have attained this Age.

Remarks.—The Swedish vessels imported about £100 worth of deals, and the Portuguese from Ireland about £500 worth of earthenware and butter.

The exports consist almost entirely of salt and fruit. The English took 2,450 chests of oranges, the French 5,200, and other nations about 1,200 boxes. The English also took 1,040 quintals of corkwood. The Portuguese all went to England or Ireland, and, besides salt, took 4,000 chests of fruit and 300 quintals of corkwood.

The tonnage of foreign vessels is estimated from the number of moys of salt they load, each moy weighing 14 cwts.; that of British is taken from their registers.

(B). A Statement of the Productive Industry of the Island of Sicily.

The produce of Sicily embraces four branches of Industry:—Agriculture, Manufactures, Mining Operations, and Fisheries.

Agriculture.—The Sicilian territory is said to be thus distributed:—

	Sicilian Salms.	
Uncultivated Wastes	..	208,033
Cultivated—1. Arable	680,760	
2. Vineyard	20,000	
3. Garden	50,000	
4. Woods	210,000	
5. Pasture	286,551	
		1,248,193
Total extent in Salms		1,456.226
Total extent in English Acres		7,766,538

1. *Arable Lands.*—The soils are of various qualities, but mostly come under the head of calcareous where they are deep; they are rich and fertile loams where they are shallow; they contain marine exuviæ, which, under a sterile appearance, produce the most luxuriant crops.

   The only manures in general use are the dung of horses and oxen. Lime and bones are totally neglected. Irrigation is much practised in particular districts.

   The prevailing method of cropping is to allow the land to lie fallow the first year, to plough it in the second, and to sow wheat or barley in the third. The most frequent crops are those of Wheat, Barley, Beans, Pulse, Indian Corn, and Rice; the less usual are those of Barilla, Cotton, Wool, Flax, Hemp, Saffron, Shumac, and Tobacco.

2. *Vineyards.*—The Vine is cultivated in all parts of the Island. The principal Vines are those of Marsala, Melazzo, the Faro Riposta, and Syracuse. They are exported in large quantities to all parts of the world.

3. *Olive-Grounds.*—The principal are situated on the Northern coast of the Island. The Sicilian Oil is inferior to the Gallipoli, and is principally used in the soap manufacture: the annual production is estimated at 10,000 imperial tuns.

4. *Orchards and Gardens.*—The chief fruits are Oranges and Lemons, which are raised in immense quantities for consumption and exportation. The quantity consumed is unknown; the quantity exported averages 100,000 boxes per annum. From the waste, or rejected fruit, an essential Oil is extracted, and a juice called Citric Acid is expressed, both of which are largely exported. The fruits of lesser consequence are the Almond, the Cactus Opuntia, the Carob, the Chesnut, the Fig, the Mulberry, and Nuts of various species. Orchards and Gardens are irrigated by Persian wheels and by other contrivances.

5. *Woods and Forests.*—The only Forest in Sicily is that of Caunia, situate in the northern mountains, the extent of which is about 14 miles by 6. It abounds in Oak, Ash, Pine, and Elm, of which trees large quantities are cut down annually. In the Woods are found the Cork tree, valuable for its bark, and the Fraxinus Ornus, which yields the Manna of commerce.

Live Stock.—The Domestic Animals are such as are common to other countries of Europe.

Mines.—The principal Mines are those of Brimstone, which yield an annual production of 1,200,000 cwts. Of this quantity about $\frac{3}{10}$ are exported to Great Britain, $\frac{4}{10}$ to France, and the remainder to other countries of Europe and America.

Manufactures.—The principal Manufactures are those of Cotton, Silk, and Paper, the Tanning of Hides, and the making of Salt from sea-water. Minor branches of industry are numerous, as those of rearing Silk-worms, the management of Bees, the collection of Cantharides, the preparation of Lamb and Kid Skins, the manufactures of Liquorice-paste and Cream-of-Tartar.

Fisheries.—The chief Fisheries are those of the Tunny and the Sword Fish, Anchovies, and Sardines.

(I). The COMMERCIAL INTERCHANGE between the TWO SICILIES comprises a variety of Articles, the value of which there are no means of estimating.

The following is a summary of the General Trade:—

Classes.	Imports into the Island of Sicily from Continental Dominions.	Imports into Continental Dominions from Sicily.
1. *Raw Produce*.	Fruits in general, Green and Dried Oranges and Lemons, Liquorice Root, Raw Silk.	Wheat, Barley, Rice, Almonds, Pistachios, Carobs, Oranges and Lemons, Cotton Wool, Sheep's Wool, Raw Silk.
2. *Preparations*.	Timber, Wood, Charcoal, Fuel, Salt Meats.	Provisions, as Cheese, Marine Salt, Salt Fish; Wine, Brandy, and Spirits; Barilla, Cantharides, Shumac.
3. *Manufactures*.	Cotton Twist, Cottons, Linens, Woollens, Stationery, Turnery.	Cottons and Silks, Leathers, Fishing Tackle, Chairs, Gunpowder, and Small Shot.

Contraband.—The quantity of Colonials and Manufactures smuggled annually into Sicily is unquestionably great, but no data exists for computing its amount. It is believed that the excess of Imports into Sicily over the Exports to the Continent, added to the value of articles smuggled Inwards, goes far to adjust the balance between Sicily and all other countries.

Hare-Skins . . . . . Doz.	33,300	0 3 6	The principal articles exported to England are hare-skins, otto of roses, silk, yellow berries, and valonia. The trade in tobacco and bees' wax is confined to Germany. The silk is about 10 per cent. inferior to that of Brussa, and is chiefly consumed in the silk manufactures at Constantinople. The sheep's wool is the finest in Turkey; it has hitherto been sent exclusively to France.

Note.—Our estimate of the quantity taken for consumption does not include any cotton manufactured in the States South and West of Virginia, nor any in that State, except in the vicinity of Petersburg and Richmond.

It has been objected to our statements, that the cotton received from Texas does not properly belong to the crop of the United States. As we are inclined to make our account literally what it purports to be, it is our intention hereafter to deduct it. The quantity received during the past year was 3,564 bales.

* A large proportion of the Manufacturers having mistaken the intent of the query respecting the Capital which they employ, and having returned only that which was invested in fixtures, the Committee have no doubt that from one-fourth to one-third might with propriety be added under this head to the total amount. In the Southern and Western States no less than thirty Establishments have been reported to the Committee; but as no accurate Returns have been received from those States, they have been omitted altogether.

No. 238.—NEW GRANADA.

(A). A Statement of the Population of New Granada, according to the Census taken in the Years 1825 and 1835.

Years.	Population.	Remarks.
1825	1,228,259	The Population in 1835 may be more correctly stated at 1,700,000, owing to errors made by the Local Commissioners in taking the census.
1835	1,687,109	

(B). A Statement of the Increase or Decrease in the Population of each Province of New Granada during the Period occurring between the Census taken in the Years 1825 and 1835.

PROVINCES.	Increase.	Decrease.	Remarks.
Antioquià	53,764	..	The Increase may be in part attributed to errors supposed to have existed in the Census of 1825. The Decrease in the Province of Casanase has arisen from the continued desertion of the indigenous inhabitants.

* The items under the head of Sardinia are not to be understood as exports to that nation alone. Spanish vessels during the non-intercourse with her late South American Colonies traded principally under the Sardinian flag; and the Custom-house tkeep heir imports and exports under the denomination of "Sardinia, and the Mediterranean States." It ought, however, to be understood that at least two-thirds of the amount standing against Sardinia is wholly Spanish property, the return for wines, oils, &c. shipped from Spain in Sardinian vessels.

Return of Average Prices of Wheat, &c.—(*continued*).

It is difficult to state, with entire accuracy, the relative value of wheat, the produce of different countries, as this must depend upon the seasons. It is considered that when fine English white wheat sells for 66*s.* per quarter, the finer qualities produced in each of the under-mentioned countries will generally sell for the price given in the following list: it rarely happens, except when the wants of England are great, that any but the finest qualities are imported from foreign countries.
